

Controllable

A HDL automation system is designed to work behind the scenes, creating the perfect atmosphere via automated sequences and adaptive environmental management.

Sometimes though a human touch is needed, that's why we've created the intuitive Intelligent Hotel Management Software, and Guest Room App.

Hands On

For those who prefer a traditional interface, with the push of a button, a flick of a switch, or a swipe of a screen, every element in a guest's room can be controlled effortlessly.

If a panel is to be used in a public area a password can be set, enabling it to only be used by members of staff.

Proven

Installing an automation solution into a building is a big step.

At HDL we know this, and have worked with countless industry leaders around the world. With our unique innovations, a hotel can increase productivity, profitability, efficiency and guest satisfaction.

Some of our past partners who have chosen the HDL hotel advantage include:

Profitability

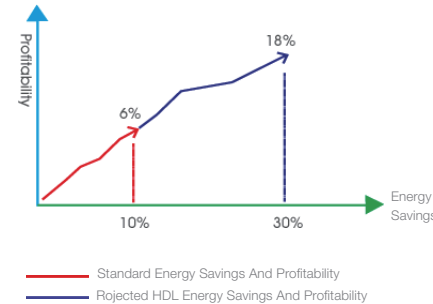

"If an average hotel reduces its energy consumption by 10%, profit margins will be raised by 6%."
-US.EPA (www.energystar.gov)

With a HDL hotel installation, thanks to light harvesting, temperature balancing, intelligent lighting, occupancy detection, and smart appliance control, energy reductions of 30% are common.

HDL Automation

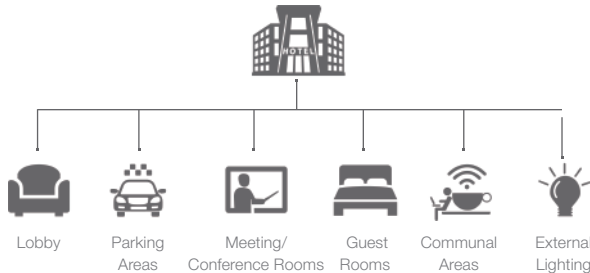

What Is Hospitality Automation?

Hospitality automation makes the day to day running of a hotel simple, efficient, and effective.

HDL brings hotel owners a powerful control platform which can increase energy efficiency, enable services to be delivered faster, improve a buildings security, and increase guest comfort and convenience.

Automate Your:

Holistic

From reception to guestrooms, and hallways to back of house, a HDL hospitality automation solution can provide users with universal control over an entire building.

Our system can be installed during retrofitting, remodeling, or during construction to empower managers to provide unparalleled levels of control.

Secure

Make sure that guests have a safe and secure stay by integrating HDL Hospitality solutions with your existing security system.

In addition to improved sensor coverage and access control, guest room security can also be improved. From an unsecured door warning, to panic buttons and glass break detectors, HDL offers the most complete guest protection possible.

Compatible

One of the best things about a HDL hospitality solution is that it's fully compatible with a hotels existing PMS system.

Using a combination of the HDL Intelligent hotel management software, and the existing PMS system, hotel procedures can be automated, real time reports generated, and real time monitoring and control achieved.

Our automation solutions have been successfully integrated with:

If your PMS software is not shown above, don't worry. HDL engineers can integrate our automation solutions into any PMS platform.

Customizable

We know that every automation installation is different, that's why we offer a full customization service to every HDL customer.

Maybe a panel needs to be a specific shade of red, or a doorbell needs to be engraved, a HDL hospitality solution is as flexible as you need it to be.

Customized Iconography

The Future of Hotel Management

“ENHANCE THE GUEST EXPERIENCE, WITH A MORE EFFICIENT ENVIRONMENT”

HDL hospitality solutions empower hotel owners to optimize their building, and provide guests with truly memorable experiences.

With HDL hospitality automation, time consuming tasks become trivial, and labor costs are reduced.
